

# FUNDRIVER Security Summary

---

Security Feature	Description
Antivirus	In order to protect your data and insure system availability, FUNDRIVER uses industry leading software to scan its systems and contents for dangerous viruses at multiple levels including e-mail and all other data that enters the FUNDRIVER system.
Anti-Spyware	Spyware can be dangerous and disruptive. FUNDRIVER uses industry leading software to prevent spyware from entering its systems.
Network Firewall/VPN	Industry leading software prevents unauthorized access to the system. The firewall is configured to allow for VPN access where required.
Intrusion Detection and Prevention	All FUNDRIVER applications are protected from access behaviors that are known to potentially affect the confidentiality, integrity or availability of your data.
Disaster Recovery/Data Protection	In the event of a system failure, FUNDRIVER has developed backup plans to insure your data is safe.
Secured Socket Layer (SSL) certificate protection	SSL provides a cryptographic protocol allowing secure transmission of data being delivered to a web browser via the internet.
Access Logging	Access to system is logged and reviewed to help identify unauthorized access attempts
